DETAILED ACTION

1. This office action is responsive to the amendment filed on 8/18/2005.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Snygg (US 6,239,750) in view of Lee et al (US Patent 6,114,997).

Snygg discloses, in figures 2a and 2b, an antenna system comprising a two stacked patch antennas (10,11), the first and second ground planes (13,14), and feed network 15. Snygg also teaches that the antenna system may comprise any number of stacked element for different frequencies, depending on the number of frequencies to be used in the antenna, see column 2, lines 63-65. The patent to Snygg differs from claimed invention because it discloses a quadrature feed system, figure 2a, instead of the differential feed system as that claimed by applicant. Lee et al disclose, in figures 1, 3, and 4, an antenna system comprising a patch antenna 64, a parasitic element 66, and a differential feed system. Figure 3 shows the feed system comprising two 180 degree hybrid circuits 53. Since one of ordinary skill in the art would have recognized the benefits of achieving dual circular polarization it would have been obvious to provide the antenna system of Snygg with the differential feed system as taught by Lee et al, see column 5, lines 26-55.
